ASSOCIATE PRODUCT MANAGER | AI PRODUCT MANAGEMENT |

SUMMARY

MBA graduate with IBM Product Manager and Microsoft AI Product Manager certifications, focused on AI-first product thinking, workflow automation, MVP planning, product metrics, and human-in-the-loop design. Built Agent R and FeedbackFlow AI to demonstrate how manual workflows can be converted into structured AI-assisted product systems with clear user problems, review checkpoints, success metrics, and product-ready outputs.

PRODUCT MANAGEMENT SKILLS

Product Planning: Problem framing, user pain-point analysis, workflow mapping, MVP planning, PRD thinking, roadmaps, success metrics	AI Workflow Design: AI-assisted workflows, prompt planning, human-in-the-loop design, AI guardrails, output review, quality checkpoints
Product Execution: RICE prioritization, Jira-ready user stories, acceptance criteria, backlog structuring, metrics definition	Tools: ChatGPT, Lovable, Replit, Gamma, Canva, CapCut, Excel, Google Docs, Google Sheets; Exposure: Jira, Notion, Figma, Mixpanel, n8n, Zapier

PRODUCT PROJECTS

Agent R - AI-Assisted Reel Production Workflow + Lovable Prototype

AI Product Management Project | Proposal, POV, and MVP Plan Completed | 2026

- Identified a manual content-production problem where converting raw stories into draft reels required repeated effort across research, scripting, scene planning, image prompts, dialogue timing, and editing preparation.
- Mapped the end-to-end workflow and designed a human-in-the-loop MVP with structured prompts, approval checkpoints, reusable workflow steps, and quality guardrails.
- Created the product proposal, Proof of Value, and MVP plan covering target users, prioritized capabilities, success metrics, risks, and phased roadmap.
- Tested early reel-production samples and defined POC targets to reduce production time from 3.5-6+ hours to 1.5-3 hours, reduce script-preparation effort by 40-50%, and reduce prompt rework by 40-60%.
- Built a Lovable prototype to demonstrate workflow stages, review checkpoints, evidence tracking, and future operator-dashboard direction.

FeedbackFlow AI - Ecommerce Feedback Triage Assistant

Working Replit App + Jira-Ready Execution Backlog | 2026

- Built a Replit-based ecommerce feedback triage tool that converts raw customer feedback into category, product area, sentiment, priority, suggested action, user story, acceptance criteria, and backlog items.
- Designed dashboard, triage, backlog, and insights views to show how product managers can move from messy feedback to structured product decision inputs.
- Created rule-based AI simulation logic and a Jira-ready execution backlog with 3 feature groups and 12 delivery-ready work items.

PROFESSIONAL EXPERIENCE

Digital Marketing Manager

Infotenix and GoInformative | Aug 2021 - Jan 2022

- Started digital marketing operations for two early-stage startups, setting up execution rhythms for content, SEO, paid campaigns, analytics, reporting, and client delivery.
- Led a 3-member team across campaign execution, coordination, client updates, and delivery follow-through.
- Improved user interactions by 40% through channel planning, content iteration, campaign execution, and performance analysis.
- Increased viewer-to-conversion outcomes by 30% for public program campaigns through messaging, targeting, and campaign planning.

EDUCATION

MBA - Marketing and Analytics Specialization, GITAM School of Business | 2025 | 75%

B.Sc. Statistics, PRISM Degree and PG College | 2020 | 75%
